

**DOREY CONVERTING SYSTEMS and SYSCO MACHINERY have been collaborating for over 35 years in industries from automotive, textile to card manufacturing and medical. Our secret: listening to the market and to our customers.**

**We work with clients big and small across a range of sectors and we utilize our expertise and technology to help you develop and grow your business. We believe that analysis of your company and your product current manufacturing process is key in responding effectively to your equipment needs and we will work with you to fully understand your business to achieve the greatest result possible so that you can see a return from the investment.**

For 60 years, the company DOREY has been manufacturing, advising, adapting and servicing industrial machinery offered to its customers in various sectors.

Its principal activity is the design of industrial solutions for the cutting and the assembly of flexible or semi-rigid materials.

The various industries we serve go from automotive, textiles to card manufacturing and medical applications.

Our professional experience and know-how is our strength to offer companies the right technical solutions adapted to their needs.

Our goal is to be able to offer our customers a global vision of the markets. With a presence in Europe, on the American continent and in Asia through our Taiwanese partner Sysco Machinery, we can offer solutions to all size companies who either have a global reach or who would like to expand new horizons.

### Our two major activities :

- Welding and Assembling machines for flexible material and non-woven.

- Rotary Die Cutting, Lamination and Laser Cutting machines through DCS Europe and DCS USA (for printed electronic, Smart labels, RFID, electronics products and more.)

Our unique technology allows us to create very complex assembling of materials (flexible, semi-rigid, roll-to-roll or roll-to-sheet). We can cut, laminate, and join all different layers independently with the highest precision on the market at the highest speed possible. The machine is fully equipped with servomotors and CCD camera vision system.

### Our machines are used by:

- Apple's subcontractors,
- The electronic industry (touch screens, various components...),
- The automotive industry (electrical battery components, gaskets...),
- Technical labels and Identification documents (RFID, NFC...),
- The medical and microfluidic industries (skin patches, bandages...).

### Innovation

Our solutions are designed with constant evolution in mind, both in production and in cutting edge technologies to remain at the forefront of an ever-changing market. And we stay out in front of an industry that is changing and presenting new opportunities every day.

### Flexibility

We learn and adapt. Experience has taught us that today's industries and markets are rapidly evolving. So we've learned to adapt our service and our solutions to make each customer evolve with us.

### Customization

We listen to you, help you realize your projects, and work to exceed your expectations. We study your current process of manufacturing, so we can add value for the present and the future. And we stay out in front of an industry that is changing and presenting new opportunities every day.
